

## **Course Description – Seventh Grade Science**

This lab-oriented integrated science course includes concepts in all disciplines: earth, life, and physical sciences. As students learn science skills they study topics such as earth systems and cycles, Newton's Laws, processes in living organisms and ecosystems, and interactions between matter and energy. In addition, this course includes a study of all body systems, including a two-week unit on human reproduction. A letter will be mailed to parents announcing the dates of the unit, and inviting parents to a preview. Throughout this unit, take-home assignments will provide parents an opportunity to discuss various topics with their children.
