

Security on a CFISD Chromebook

CFISD takes students' safety while on the Internet very seriously. Below are some features added to the CFISD Chromebooks to increase security and safety for students.

1. Each CFISD Chromebook has tracking software installed to help locate lost or stolen devices.
2. Filtering software has been included to ensure safe browsing while students are using Internet resources.
3. The filtering software will direct students back to the CFISD network regardless of what Internet service they are using.
4. The CFISD Chromebooks will automatically update as new security features come out.

CFISD will do everything possible to protect students while they are on the Internet, but nothing replaces parent monitoring while students are using their devices.
