

The **Texas School Accountability Dashboards** (TSAD), prepared by TEA in response to a statutory requirement, are accessible from a new website at <http://www.texasschoolaccountabilitydashboard.org/#>.

TSAD generates graphs with accountability data displays for schools and districts. According to the "About" pop-up on the TSAD web site, the data will be refreshed each November to capture the most current information.

Anyone may use the site to look for a specific school's or district's demographic and performance information. The performance information includes bar charts that display index scores and the performance on STAAR tests by subject, student group, and special language program.

Users can compare the data for two different districts or for two different schools. Once the comparison school or district is selected and the user clicks on the "View Dashboard" button, the tables and graphs for the two districts or schools will come up, side-by-side, on the user's screen.
